

ABSTRACT

The present invention comprises a fastening and decorative device which comprises a resilient o-ring shaped anchor ring and a decorative device or unit comprising in combination an ornamental unit connected to a base support unit having hook on means for removeably attaching to the anchor ring. The hook on means is connected to the back of the base support unit and comprises a reversed R-shaped configuration in cross section. An alternative embodiment for the hook on means comprises an inverted J-shaped configuration in cross section, connected to the back of the base support unit. Another alternative embodiment of the device resides in removeably attached snap on units connecting the ornamental unit to the back support unit. The decorative device can also contain hook on clip units.
